We have invented a new design of a **SPRING-LOADED PIEZOELECTRIC GENERATING STRIKER DEVICE** as set forth in the following specification. The claimed portion of the design of the **SPRING-LOADED PIEZOELECTRIC GENERATING STRIKER DEVICE** consists of include a piezoelectric material that converts kinetic energy into electrical energy, a spring mechanism that stores and releases energy, and a hammer that repeatedly strikes the piezoelectric surface. When force is applied, the spring compresses and then releases, propelling the hammer to impact the piezoelectric material, generating an electric charge. The generated energy can be stored in batteries or used directly to power small electronic devices. This device is highly efficient in energy conversion and is durable, making it suitable for various applications such as footstep energy harvesting, industrial machinery, and smart infrastructure. By optimizing factors like spring stiffness, hammer impact force, and material efficiency, this sustainable energy solution can significantly contribute to renewable power generation in environments with high mechanical vibrations or foot traffic.

We Claim that:

The novelty resides in the shape and configuration of the “**SPRING-LOADED PIEZOELECTRIC GENERATING STRIKER DEVICE**” as illustrated

No claim is made by virtue of this registration in respect of any mechanical or other action of any mechanism whatever or in respect of any mode or principle of construction of the Article.

No claim is made by virtue of this registration to any right to the exclusive use of the words, letters, numbers, Color, symbols, QR codes or trademarks appearing in the representation.
